

Improve Gallaudet Workday

AHC 621

Access Innovators

Emeka and Amy

Redesigning class registration and override requests for Gallaudet students.

Milestone 1: Background and Problem Statement

Background

- Gallaudet is a Deaf-centered university.
- Workday is required for class registration, schedules, and academic information.
- Students rely on it during time-sensitive registration periods.

Problem

- Some Workday tasks feel confusing and take too many steps.
- This can create stress and delay registration.

Primary Users

- Gallaudet Students
- Advisors and faculty
- University support staff

Goal: Understand where the workflow breaks down and redesign the process to be clearer, faster, and more supportive.

Stakeholder priorities: Easier navigation, clearer instructions, visible progress, and better access to support.

Milestone 1 to 2: Research Plan and Direction for Solutions

Research activities:

- Task observation and feedback collection from Gallaudet students

Main task focus:

- Course search, registration, class schedule review, and override requests.

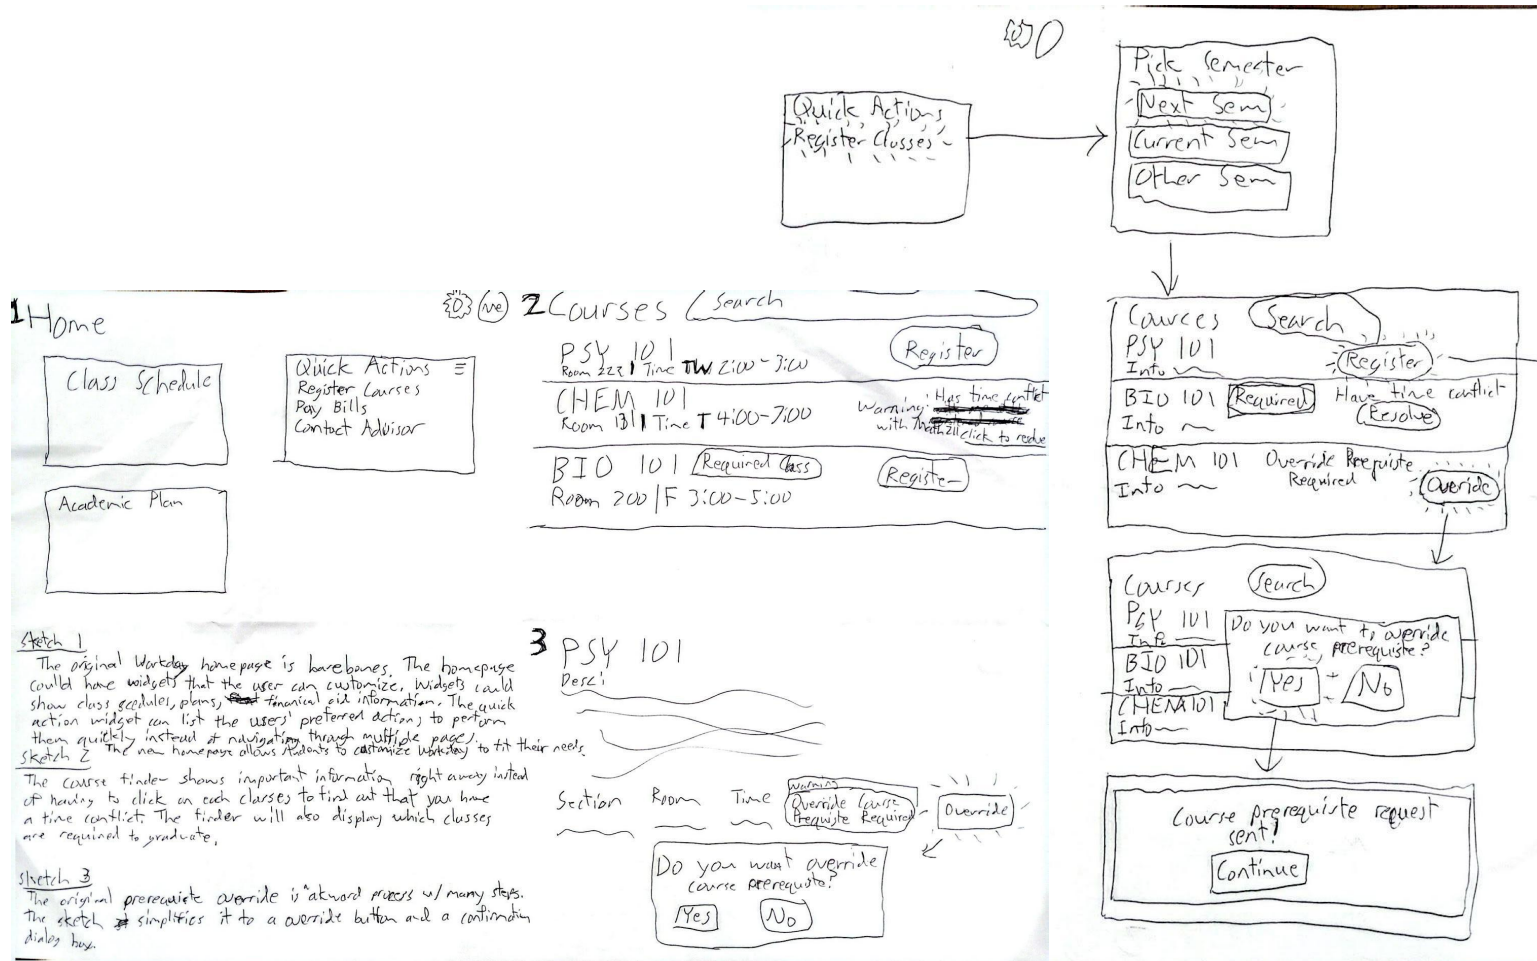

General design direction:

- Reduce extra clicks, combine related steps, and make next actions easier to understand.

What we wanted to improve

- Navigation that feels more direct
- Clear status messages and confirmation
- Reduce steps to register classes

Milestone 2: Sketches and Early Concepts

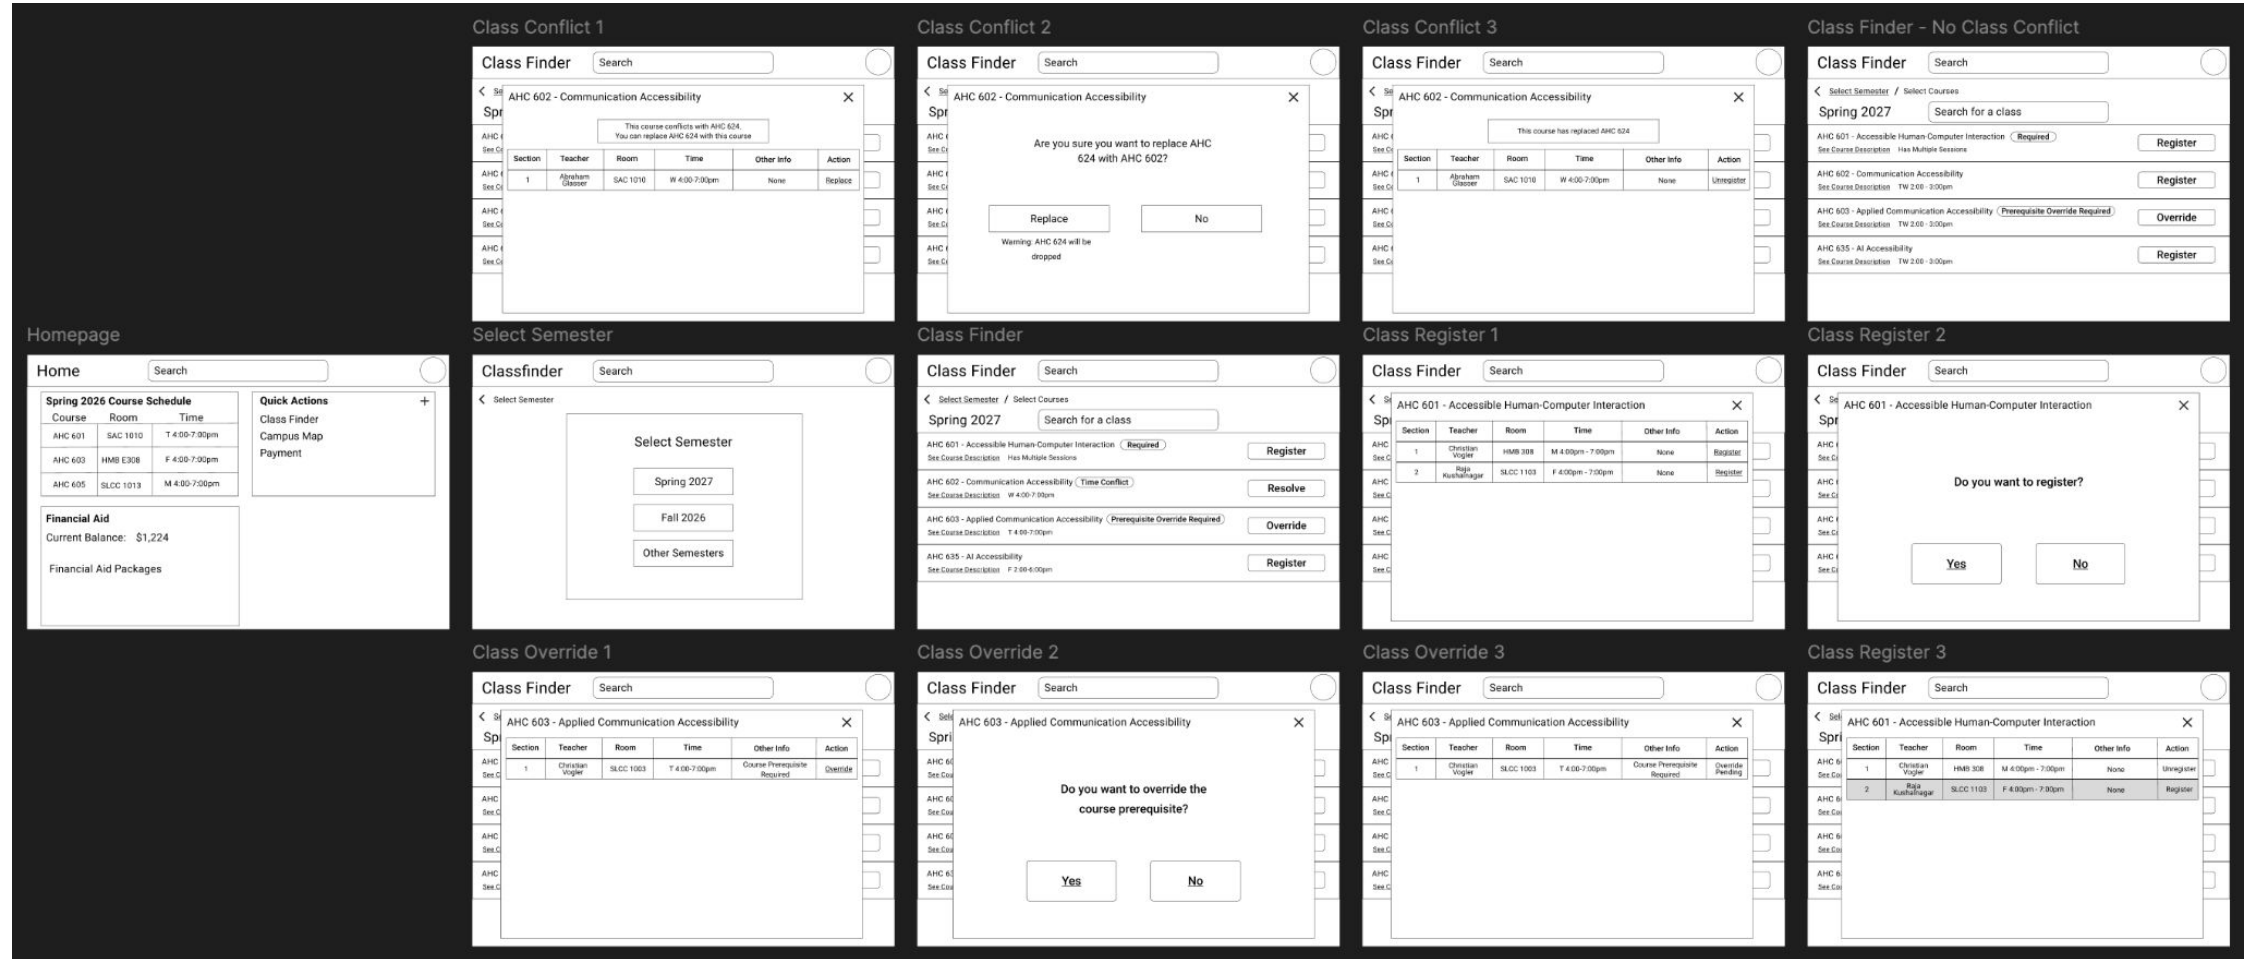

The sketches explored a simpler path from searching for a course to requesting an override.

We added visible steps, accessibility shortcuts, and clearer confirmation messages.

Early sketches showing a simpler Workday class registration and override process.

Milestones 3: Low-Fidelity Prototype

Low-fidelity prototype showing class search, registration, and override request flow.

Milestones 4: Low-Fidelity Prototype Evaluation

Procedures

- Tested with 8 participants with a test case
 - You are an AHCP student who is trying to register for 3 classes, AHC 601, AHC 602, and AHC 603, for Spring 2027.
- We recorded how much time the participants took to complete their task
- Participants completed a post-evaluation survey
- Then we had a short open-ended discussion

Milestones 4: Low-Fidelity Prototype Evaluation

Survey Questions

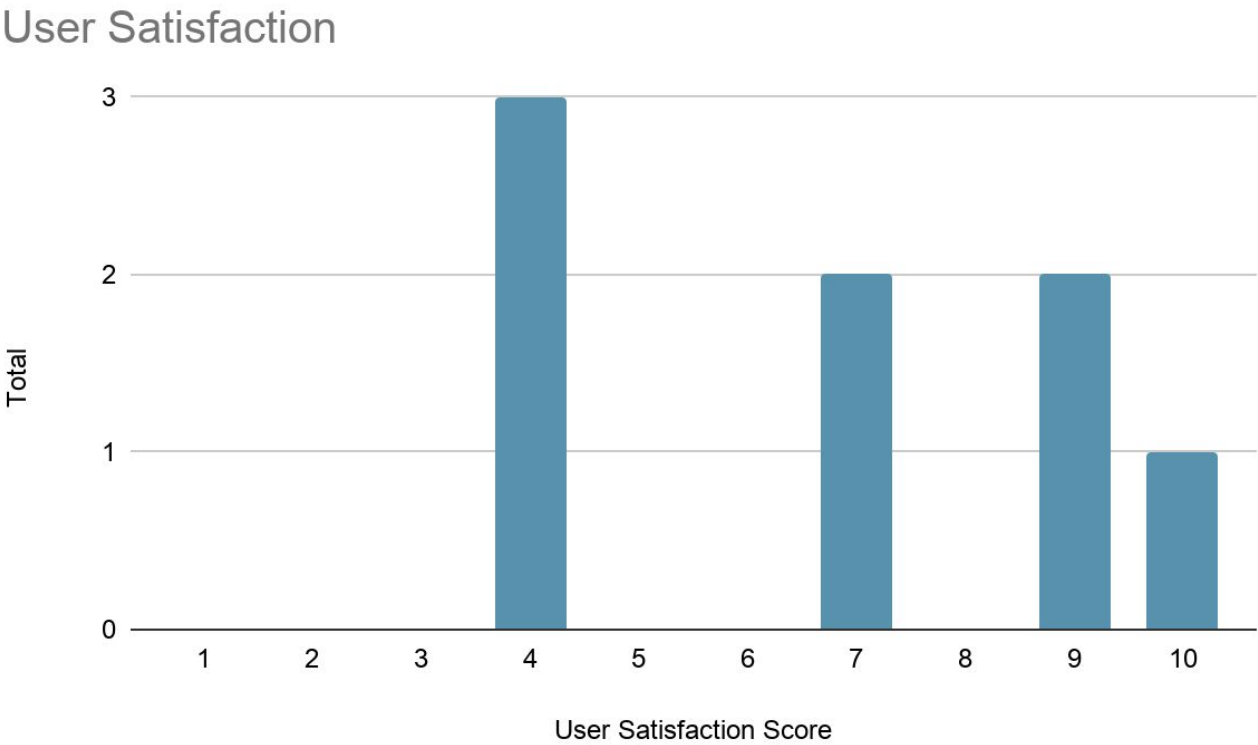

1. The interface is easy/hard to use.
2. The interface is understandable.
3. The registration process is understandable.
4. How fast/slow is the process?
5. From 1 to 10, how satisfied are you with the current design?
6. Do you have any suggestions for improvement?
7. Do you have any additional feedback?

Milestones 4: Low-Fidelity Prototype Evaluation

Average Time: 2 min

	Average Score
Interface Usability	4
Interface Understandability	4.25
Registration Process Understandability	3.75
Registration Process Speed	3.5
User Satisfaction	6.75

A table of averages for each survey question

A user satisfaction bar chart plotting how many users gave a specific user satisfaction score

Milestones 4: Low-Fidelity Prototype Evaluation

Actions for High-Fidelity Prototype

- Add more colors to make buttons and other elements standout
- Better feedback system
 - E.g., make it easier for students to check their schedules
- Show link to conflicting class, so the user can easily check the class before making decisions

“I like that I can clearly see important information [on the homepage] in one place”

“it is very clear and simple, but I would like to see more color visible that easy for people know where to click next or guide to next step.”

Future Work

- Further refine the class registration process
- Add more features
 - Academic plan page
 - Financial aid page
- Interview more users to better understand their needs
- Test with more users
 - Include users with various disabilities

Conclusion

This project focused on a real challenge: helping Gallaudet students complete important Workday tasks with less stress and confusion.

Across the milestones, we moved from problem definition to sketches, prototype testing, and a higher-fidelity redesign.

The final concept shows that clearer navigation, visible progress, and fewer steps to register classes.
